Description:
With the amount of pets in the world without a forever home, it would benefit these animals to have a website focusing on securing them a home. A website about adoptions would give pets an opportunity to be adopted from families as it will be easier to get interest in these pets through an online website. It would help show the amount of pets that need a home, and help and encourage people to adopt and save these pets.

Therefore, we have decided to make an online eCommerce website about online Pet Adoption. There will be basic core features including user creation and deletion, searching pets, adoption transactions, and inserting and deleting pets from the database. It will also include extra features that will give the website more customization including filtering pets to the families liking, commenting and liking pets, as well as finding and contacting people who have these pets currently.

Github Repo:
https://github.com/cindytran211/CS546-Final-Project

Core Features:
- [ ] Users can create account
- [ ] Users can login to account
- [ ] Users can log out of account
- [ ] Users can enter search criteria for pet browsing
- [ ] Users can browse the return from browsing.
- [ ] Show pet type (Dog, Cat)
- [ ] Show pet stats (age, breed, description, where they're located)
- [ ] Show pet image.
- [ ] Users can choose to adopt the pet.
- [ ] Admin can add the pet to the db.
- [ ] System will delete the pet after adoption

Extra Features:

- ☐ Filter pets by types or stats
- ☐ Users can have preferences on their profile
- ☐ Users can find nearest pet adoption center
- ☐ Users can comment on and like the pet posts
    - ☐ Without an account you cannot comment on or like posts
- ☐ Users can report bad comments
- ☐ Show a map where all pets on website are located
- ☐ Be able to message and contact the business about animals
    - ☐ Without an account you cannot message
- ☐ Can have the option to show the most popular pets based on the amount of likes and comments the pet post has
- ☐ Add and remove pets from a 'favorite' pets page to keep track if pets are available
